CASE STUDY

RioTinto

Context

The newly appointed General Manager of Operations recognised that the business was undergoing significant change which presented HSE challenges. There was a mindful intent and commitment to ensure their people returned home to their families safely each and every day, but they recognised that HSE performance of the mining operations required significant improvement, to enable this to occur.

Action

Actualise collaborated with the operational leadership and operation personnel to develop, deliver and implement the "Safe Production System Solution" TM throughout the Argyle underground and surface operations.

Result

Sustained HSE performance improvement, whereby after HSE Leadership development was implemented lost time injuries dropped below what was thought to be an achievable target to a record low.

Argyle Diamonds - Rio Tinto Safety Improvement Results After Leadership Training 2015 - 2016
